

iPhone Use the APP Store Software

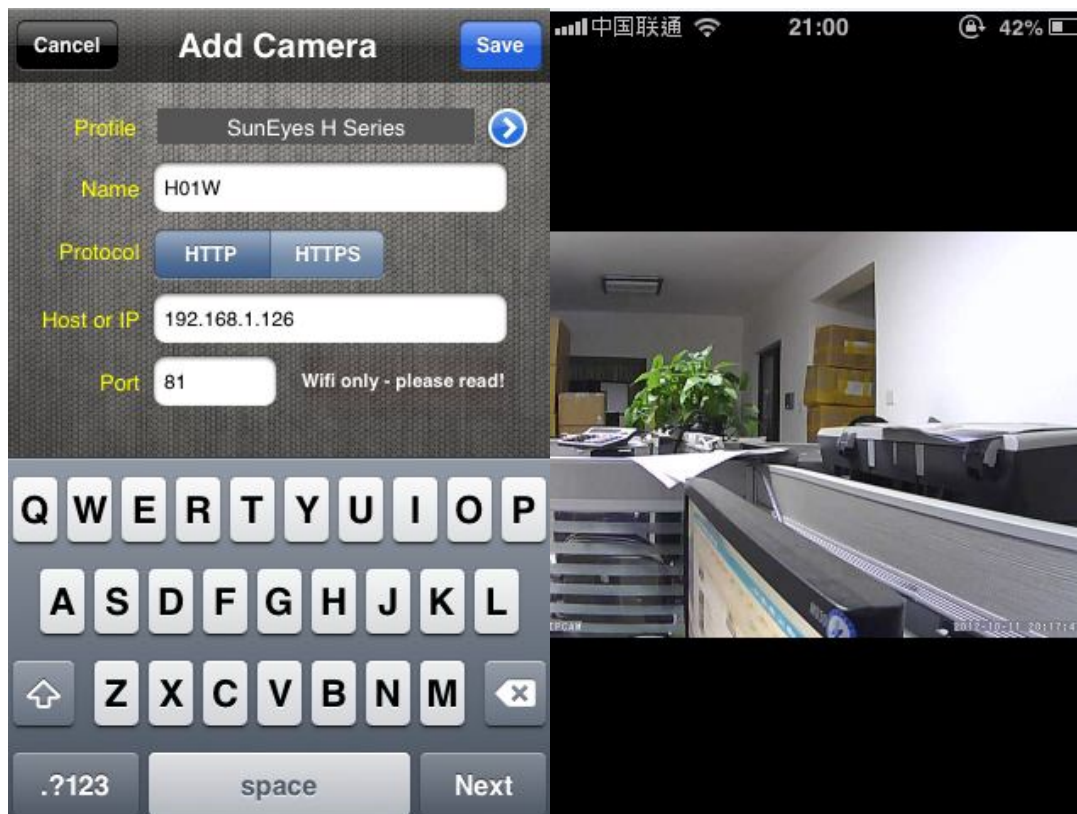

1. <http://itunes.apple.com/us/app/live-cams-pro-ip-camera-viewer/id428145132?mt=8>
(visit this link from iPhone/iPod/iPad to install the software)

2. Firstly you need to chose the suneyes ip camera series:

3. View and control the IP Camera in LAN (your camera and Iphone in the same LAN,),the host or IP just use the camera LAN IP will be workable:

4. View and control the IP Camera in WAN /Outside Network(Make sure your camera is available to view from WAN, the port has open from router),the host or IP should be the remote IP or ddns:

5.You can control the camera Pan/Tilt ,audio,reboot,recording,etc.

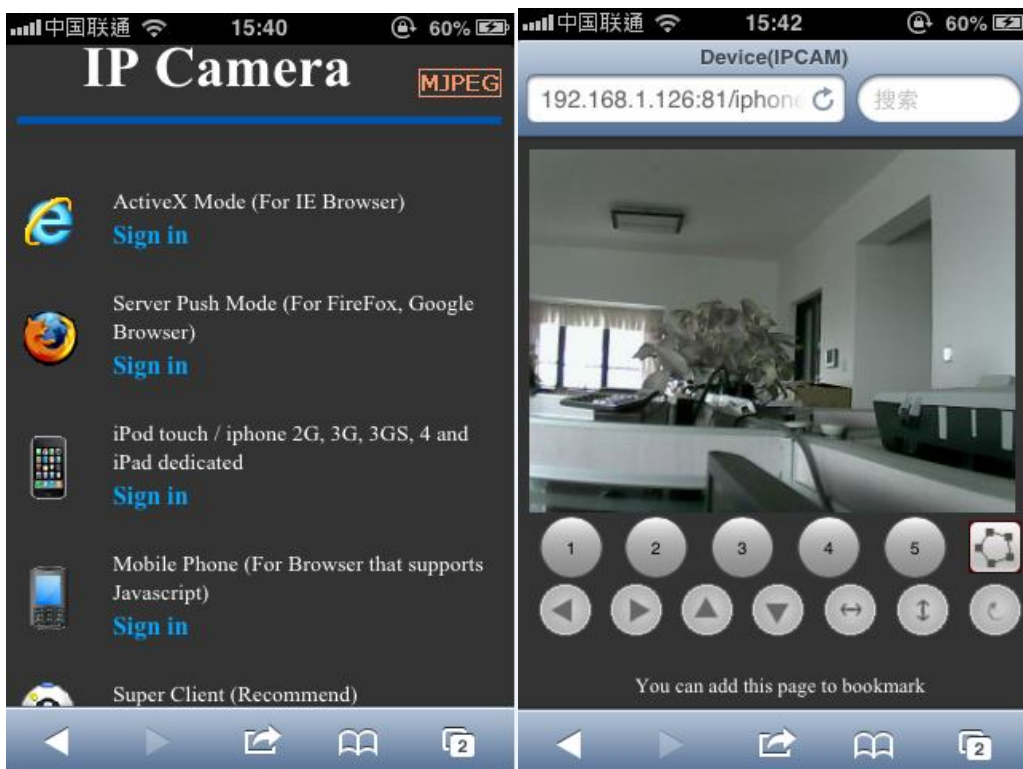

Use the Safari Browser

1. use the remote ip or ddns directly in the safari browser:

2. Chose the iPod/iPhone  ,Then you can control and view the ip camera from your phone

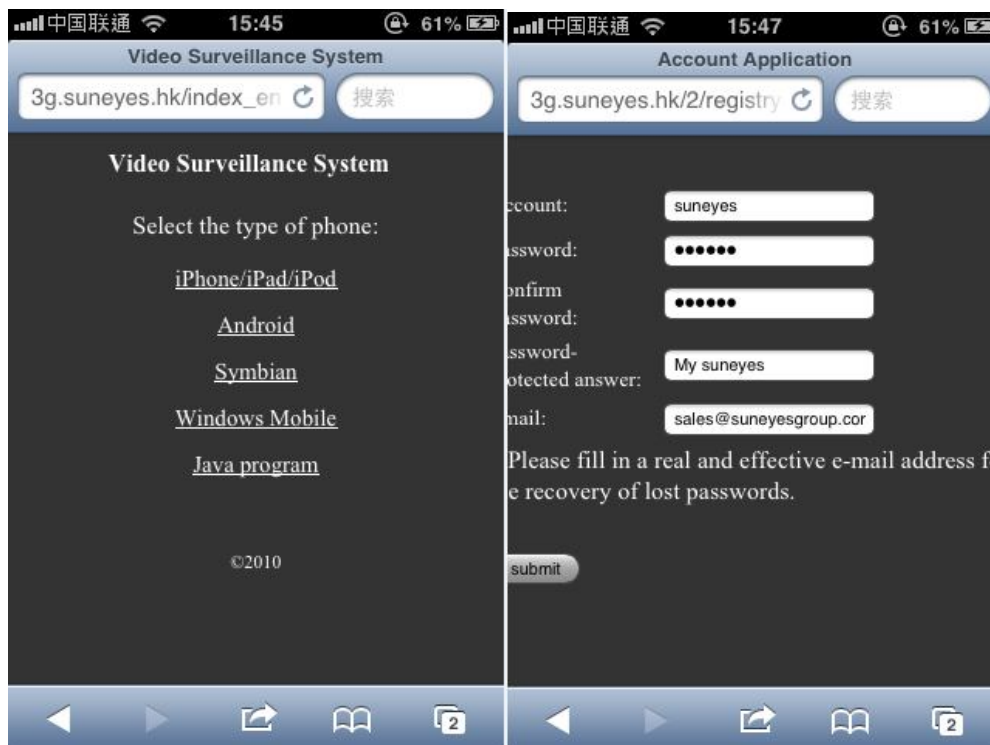

Use the 3g.suneyes.hk

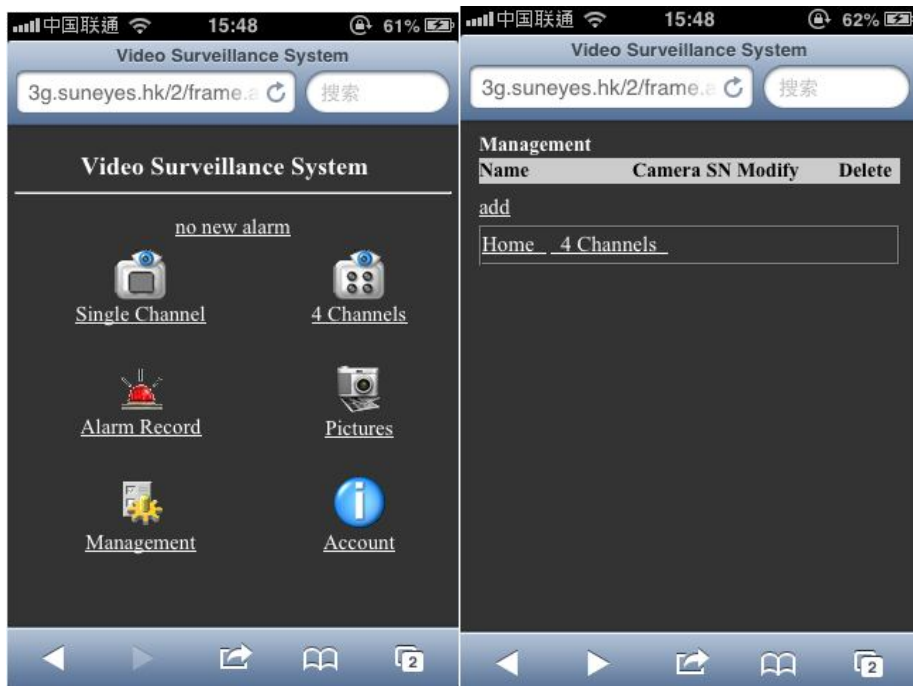

1.Type the “3g.suneyes.hk” in your Phone Browser

2.Chose your phone system and Register one account (Free to register)

3. Log In with your account and chose management

4. Add camera, camera SN is the remote access (for example: if your remote address is uwkx.suneyes.hk, the Camera SN is: uwkx ,you must use the factory built-in DDNS)
